Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance.

The closest cited prior art of record, US 2001/0050741 and US 6,383,559, fail to teach or suggest, even in view of each other, US 5,909,314, US 6,210,858, US 6,254,973, US 6,181,400 and US 6,633,353, the combination of structure and specific layer placement for an antireflection film comprising: a transparent support; and as an outermost layer, a low refractive index layer containing a fluorine-containing polymer, wherein the low refractive index layer comprises at least one inorganic fine particle having an average particle size of 30 to 100% of the thickness of the low refractive index layer, and at least one silica fine particle having a particle size of less than 25% of the thickness of the low refractive index layer.

Art Unit: 1772

None of the references teach the combination of the inorganic fine particle having an average particle size of 30 to 100% of the thickness of the low refractive index layer, and the silica fine particle having a particle size of less than 25% of the thickness of the low refractive index layer, wherein the combination is part of a low refractive index composition that forms the outermost layer of an antireflection film.
